STEALTH ACCESS DOORS... *It's all about what you can't see.*

Stealth Access Panels are glass fiber reinforced gypsum (GFRG) panels designed to blend seamlessly into drywall ceilings and walls. The ceiling access panels consist of a surround frame with pre-spotted fastener holes and a drop-in door. Also available in round, when circular light fixtures, speakers or smoke detectors are being used to maintain the aesthetic theme in the design. Stealth hinged panels also consist of a surround frame with pre-spotted fastener holes with a concealed hinge and lockable door for both wall and ceiling applications. Available in multiple, standard, commercial and residential (drop-in style only) sizes, Stealth panels are perfect for jobs where access is required at regular intervals. Lightweight and easily textured, the panels can be used in both new and retrofit construction across unlimited applications. Their design helps contractors work smarter, faster and better. The residential models incorporate an energy saving gasket seal that keeps attic temperatures from infiltrating living space. Original Stealth Brand Access Panels provide an aesthetically pleasing, "out of the closet" solution for a more attractive interior. STEALTH...It's the better way to do access panels! Original Stealth Brand Access Doors are Made in the USA. Accept no imitations.

PRODUCT FEATURES

- ▶ Tapered edge for tape joint
- ▶ Easily textured
- ▶ Lightweight
- ▶ Smooth round edge
- ▶ Single trade installation
- ▶ Blends into surrounding drywall
- ▶ No shrinkage
